TERMINATOR 2

Game Rules

You need two credits to start a game, and one credit to continue.

For a single player game press either of the Red, Player 1 Start Buttons after coins have been inserted.

For a two player game, press either of the Red, Player 1 Start Buttons and, either of the Blue, Player 2 Start Buttons after coins have been inserted.

Press the trigger to shoot at targets. Press the Red Bomb Button on the gun to launch rockets. Pick-up "Power-ups" by shooting them.

Mission 1

In the future... Join up with Sgt. John Connor - leader of the Human Resistance - to destroy the Machines of Skynet. Infiltrate Skynet Headquarters to ultimately control the Time Field Generator.

Mission 2

In the present... Sent back through the Time Field Generator to protect young John Connor at all costs! Destroy Cyberdyne Systems to save the world from Judgment Day!

MIDWAY MANUFACTURING COMPANY RESERVES THE RIGHTS TO MAKE MODIFICATIONS AND IMPROVEMENTS TO ITS PRODUCTS.

THE SPECIFICATIONS AND PARTS IDENTIFIED IN THIS MANUAL ARE SUBJECT TO CHANGE WITHOUT NOTICE.

Operation

Safety Notices

The following safety instructions apply to all game operators and service personnel. Specific warnings and cautions will be found throughout this manual where they apply. We recommend that you read this page before preparing your game for play.

CAUTION

AC POWER CONNECTION. Before connecting the game to the AC power source, verify that the "line voltage selection chart" jumper wires are installed correctly for the line voltage in your area. For details, refer to Section 3.

PROPERLY GROUND THE GAME. To avoid electrical shocks, do not plug in the game until it has been inspected and properly grounded. MIDWAY games should only be plugged into a grounded 3-wire outlet. Shocks will also result, if the control panel is not properly grounded! After servicing any parts on the panel, assure that the ground wires are secure. Only then should you lock up the game.

DISCONNECT POWER DURING REPAIRS. To avoid electrical shock, disconnect the game from the AC power source before removing or repairing any part of the game.

USE THE PROPER FUSE. To avoid electrical shock, use the replacement fuse which is specified in the parts list for this game. The replacement fuse must match the original fuse in fuse type, voltage rating, and current rating.

MONITOR PRECAUTIONS. When removing or repairing the monitor, extra precautions must be taken to avoid electrical shock because high voltages may exist within the monitor circuitry and cathode ray tube (CRT) even after power has been disconnected. Do not touch internal parts of the monitor with your hands or metal objects! Always discharge the CRT by the following method: Attach one end of a large, well-insulated, 20-kV jumper to ground. Momentarily touch the free end of the grounded jumper to the anode by sliding it under the anode cap. Wait two minutes and discharge the anode again.

HANDLE FLUORESCENT TUBE AND CRT WITH CARE. If you drop a fluorescent tube or CRT and it breaks, it will implode! Shattered glass can fly eight feet or more from the implosion.

ATTENTION !

PROPERLY ATTACH ALL CONNECTORS. Make sure that the connectors on each printed circuit board (PCB) are properly connected. If they do not slip on easily, do not force them. A reversed connector may damage your game and void the warranty. All connectors are keyed to fit specific pins on each board.

Setup Procedure

INSPECTION & INSTALLATION

1. Remove all items from shipping container and set them aside. Inspect the exterior of the cabinet for any damage. Remove the shipping cleats from the bottom of the cabinet.
2. Remove keys from the taped coin return slot. Unlock and open the coin and cash box doors. (Leg levelers and spare parts are stored in the cash box.)
3. Tilt or lay the cabinet down. Locate the four threaded holes on the bottom of the cabinet (one in each corner), and install one leg leveler (with its hex nut) in each hole.
4. Stand the cabinet upright and make certain that it is in a stable position. Level the cabinet.
5. Remove the rear door of the cabinet. Inspect the interior for any signs of damage. Check all major assemblies to assure that they are mounted securely.
6. Refer to the game's Cabinet Wiring Diagram (Section 3), and check to see that all cable connectors are correctly secured. **DO NOT FORCE CONNECTORS.** Watch for damaged connectors and avoid making reversed connections.
7. Determine the value of your line voltage with a meter. Then, check the power input wires to the main power supply transformer on your game to be sure they are connected to taps which correspond to your local line voltage value. If necessary, reconnect the power input wires to the transformer in accordance with the Transformer Chart in Section 3.
8. Lay the line cord (connected to the Power Chassis) in the slot along the bottom edge of the rear cabinet door. Replace the rear cabinet door and screw (lock) it securely. Close and lock the front coin and cash box doors.
9. Plug the line cord into a grounded (3-terminal) AC wall outlet.
10. Switch On the game, using the On/Off switch located on the upper left rear of the cabinet, to verify proper operation.
11. If the following message appears on the screen when the game is turned On, the guns must be calibrated.

****CMOS RAM Error****

Unable to read gun calibration values.

Do not attempt to calibrate by opening the guns and adjusting the potentiometers manually. Gun calibration instructions are on page 1-25 of this manual.

Game Location Requirements

Power

Domestic 115V @ 60 Hz

Foreign 230V @ 50 Hz

Temp.

32° F to 100° F

(0° C to 38° C)

Humidity

Not to exceed 95% relative.

Height of game

Apx. 74"

Weight of game

Apx. 300 pounds

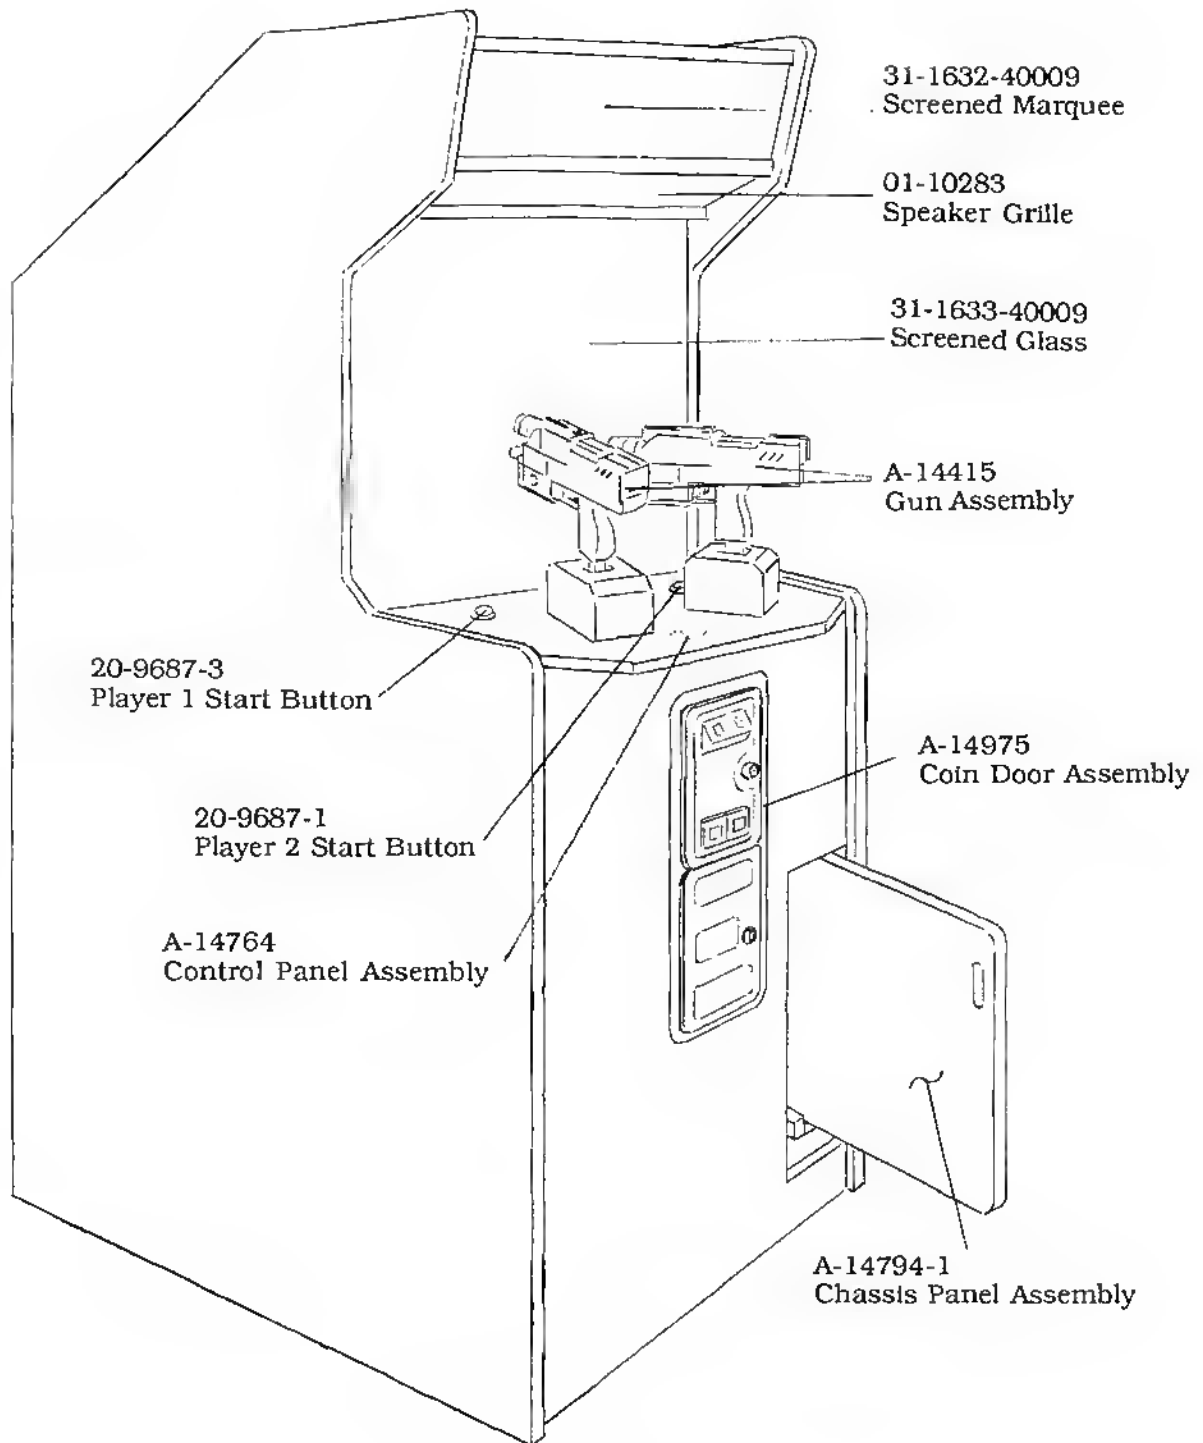

Note

Check Gun calibration when you receive your game. Guns might of been jarred during shipping and need to be recalibrated.

Note

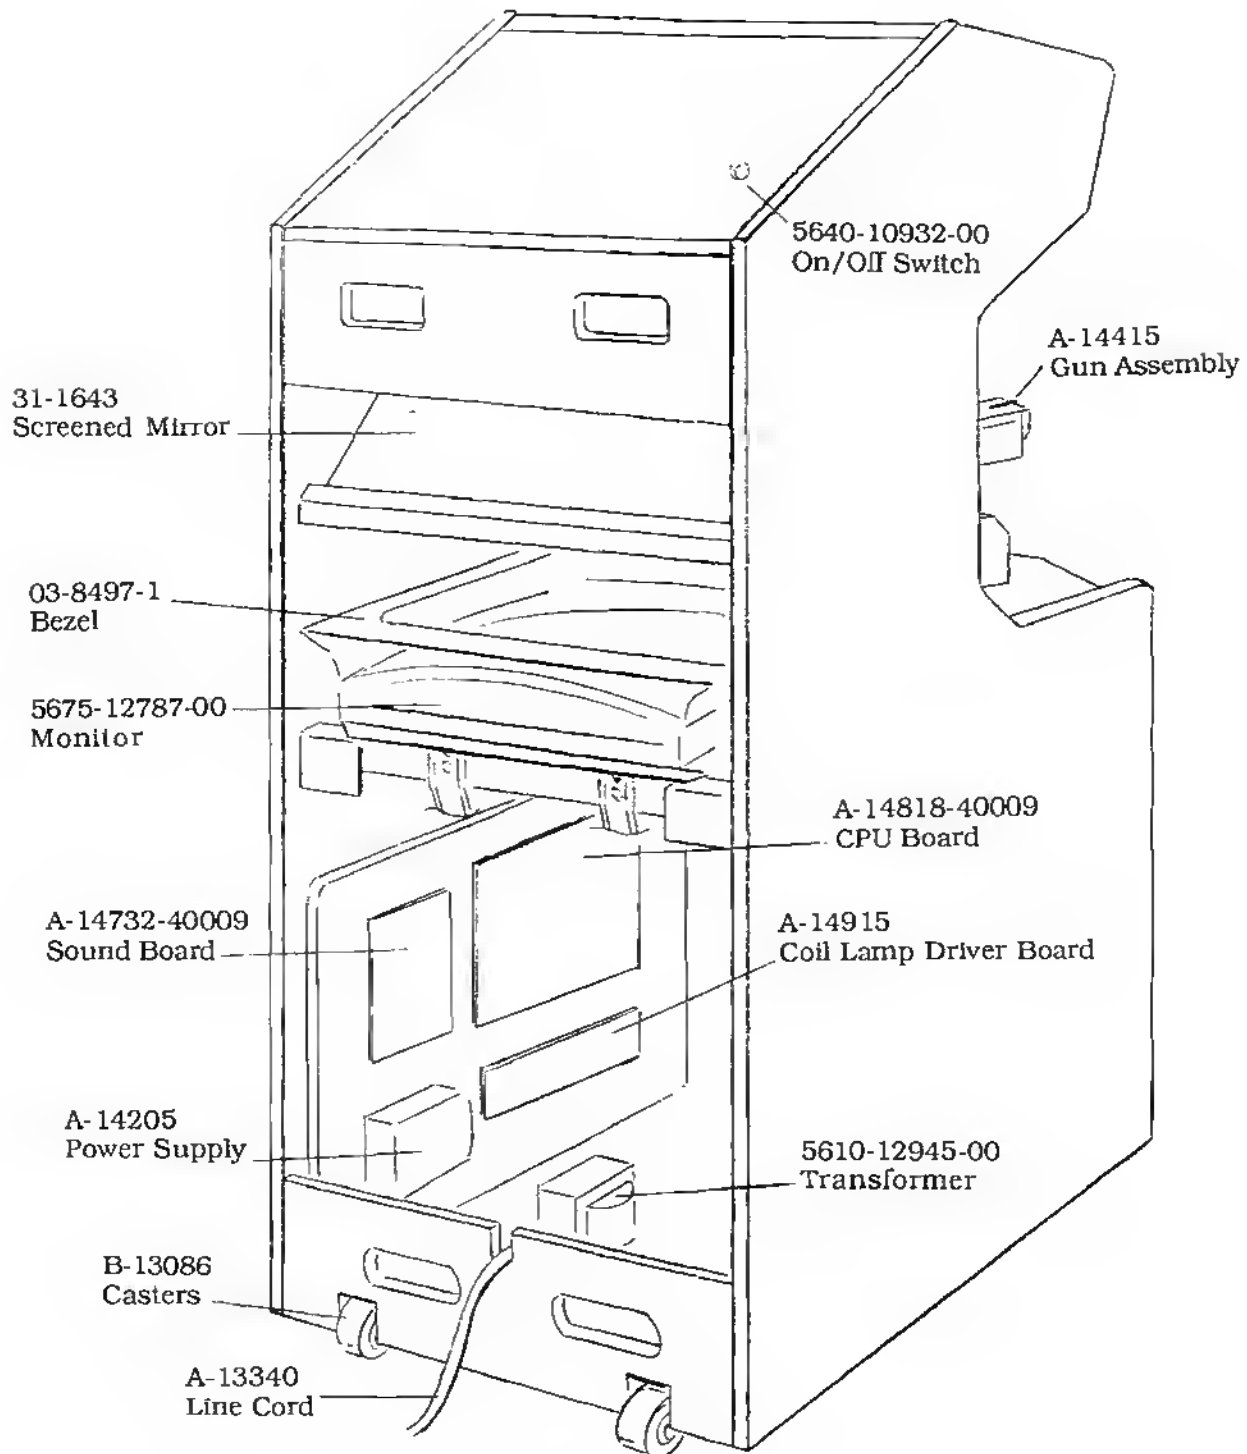

The Gun Assemblies are calibrated from the factory. However, if you change boards or replace ROMs, RAMs, or the battery, you must recalibrate the guns. Guns do not operate unless they are calibrated.

Cabinet Assembly

Front View

Cabinet Assembly

Rear View

Servicing

Note

To remove the control panel for bench servicing, reach through the coin door opening and release the latches located on the sides of the control panel. Be careful not to reach straight back through the coin door opening as you might damage the Monitor Control Board. Carefully, tilt the control panel forward until the guns rest against the viewing glass. Disconnect the cables and the ground strap. Lift the control panel out of the game cabinet.

Caution

The monitor DOES NOT contain an isolation transformer in its chassis (it is mounted instead in the Power Chassis Assembly located on the floor of the cabinet). When servicing the monitor on a test bench, YOU MUST ISOLATE THE MONITOR FROM THE LINE VOLTAGE WITH AN ISOLATION TRANSFORMER.

Caution

While removing the four bolts, firmly support the monitor from the front of the CRT so that it will not slip.

■ Servicing the Control Panel

Switch Off power to the game. The control panel is held in place by four latches (located inside the cabinet, on the left and right sides of the control panel) which provide constant pressure on the strikes. The latches can be reached through the coin door opening. To release the latches, lift the latch handle and unhook the wire fasteners. Carefully, use the guns to lift the control panel. Carefully, tilt the control panel forward until the guns rest against the viewing glass. **THIS CONTROL PANEL DOES NOT HAVE A SUPPORT BRACKET.** To reinstall the control panel, check for proper cable connections, including the ground strap, and use the guns to lower it into position, avoiding pinched wires. Reclamp the latches.

■ Servicing the Chassis Panel

Switch Off power to the game and open the coin door. The chassis panel is accessible through the front door. The front door is held in place by the same type of latch that holds the control panel. The latch, located at the top of the front door, can be reached through the coin door. Lift the latch handle and unhook the wire fastener. Push the front door from the inside of the cabinet and remove it. Use the hand hole to slide the chassis panel forward.

■ Removal of Viewing Glass

Switch Off power to the game, and open the control panel. Carefully lift the glass from its bottom groove and lift it clear of the cabinet.

■ Removal of Monitor Bezel

Switch Off power to the game. Remove T-15 torx screws holding the rear door. Remove the rear door. Remove the four screws holding the bezel. Lift the bezel off the monitor.

■ Monitor Replacement

We recommend that you read the WARNINGS section thoroughly before beginning this procedure.

Switch Off power to the game. Remove the rear door, the viewing glass and the monitor bezel. Completely disconnect the monitor from all of its cabling, including its chassis ground strap. Remove the four bolts securing the monitor's mounting flanges to its mounting panel. Pull the monitor carefully from the back of the cabinet.

■ Flashlamp Replacement

Switch Off power to the game. Open the control panel in order to remove the viewing glass; then, replace the control panel. Open the rear door. Remove the two screws holding the mirror retainer. Carefully, pull the mirror retainer out of the cabinet. The flashlamp boards are accessible from the front of the cabinet once the mirror is out.

■ Removal of the Marquee

Switch Off power to the game. Remove the five #8 hex washer head screws in the black plastic strip on top of the cabinet. Remove the strip and carefully lift the plastic marquee and the clear glass. Store the marquee and glass carefully to prevent damage.

The fluorescent tube is now accessible for replacement. Grasp the tube, give it a quarter turn, and remove it from its socket. Carefully place a new tube into the socket, and turn to reinstall.

■ Removal of the Fluorescent Light Assembly

Switch Off power to the game. Remove the marquee glass. Disconnect the fluorescent light assembly from its power cable. Remove the screws fastening the assembly to the cabinet and lift out the assembly.

■ Removal of the Speakers

Switch Off power to the game. Remove the marquee. The speakers pull out from the front of the cabinet. Be sure to disconnect the cabling and remove the nuts on the mounting bolts before attempting to pull the speakers out of their enclosure.

■ Volume Control, Test/Diagnostics Switch, and Service Credit Switch

Open the coin door to locate the game's volume control and Diagnostic switches on the small panel atop the cash box cover. The Volume Control is the white knob on left end of the panel. Turning the knob clockwise increases the volume. The upper right switch on the bracket is the Test/Diagnostics Switch that enables activating the game's Menu System. The lower right switch is the Service Credit Switch, which allows adding credits to a game for service testing without affecting the game's bookkeeping total.

WARNING

If you drop a fluorescent tube and it breaks, it will implode! Use care in handling.

Game Features

STARTING UP

Switch On power to the game. A "rug" pattern appears on the CRT screen. When the "rug" pattern ends, the screen shows CHECKING SCRATCH RAMS, and then CHECKING ROMS. The next screen shows **Terminator 2** REVISION LEVEL, CMOS TEST OK and the COIN SETTING. The game then moves to the Attract Mode.

Note

When an error is detected during Start-up Tests, game start-up pauses. Press any Start Button to continue.

Insert the desired amount of coins or tokens. Select which player receives the credit by pressing the appropriate Player Start Button.

PLAYER CONTROLS

Start Button

Each player has two Start Buttons located on the left and right sides of the guns. The Start Buttons allow one or two players to begin or continue play.

Guns

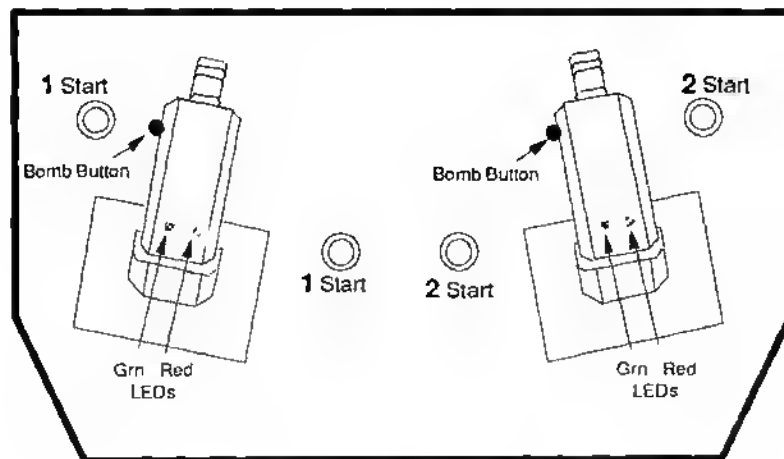

Each player has a gun. The guns allow the player to aim for and shoot at moving targets.

Bomb Button

Each player has a Bomb Button located on the front left side of their gun. This button allows the player to fire bombs at targets.

LEDs

Each player has two LEDs located on the top of their gun. The Red LED indicates the player is targeted and being shot at. The Green LED indicates that the player is on target to shoot.

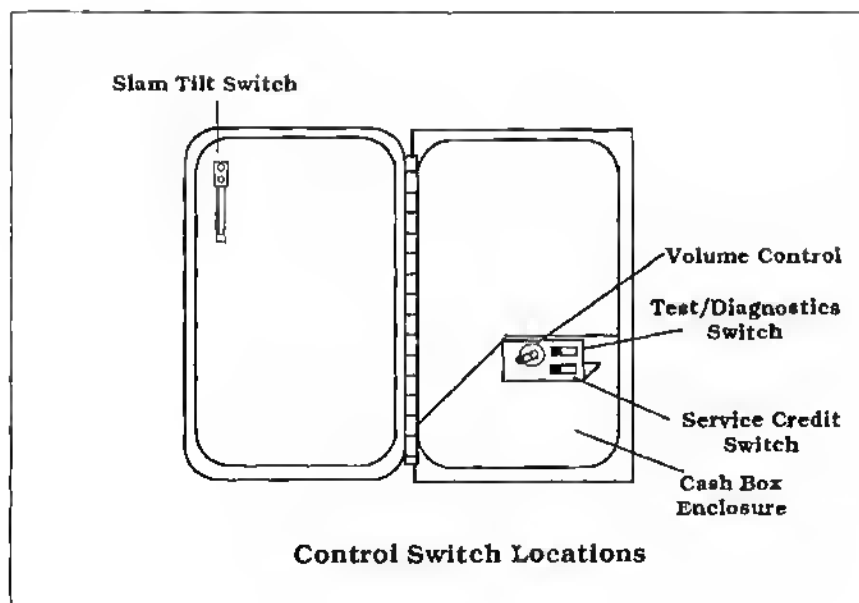

Control Panel

Game Operation

The **Terminator 2** Control Switches are located inside the coin door. These switches allow the operator to customize some features of the game.

CONTROL SWITCHES

- The **COIN DOOR SLAM TILT SWITCH** detects any forceful vibrations against the Coin Door. This eliminates pounding for free games.
- The **VOLUME CONTROL** allows increasing or decreasing the volume level of the game music and speech. For greater profits, set your game's volume level at its maximum.
- The **TEST/DIAGNOSTICS SWITCH** allows you to activate the game's Menu System. Move the Test Switch to access the Main Menu. To exit the Menu System, select EXIT TO GAME OVER from the Main Menu, then press either trigger to activate your selection.
- The **SERVICE CREDIT SWITCH** is a special feature switch that allots credits without affecting the game's bookkeeping total.

Menu System Operation

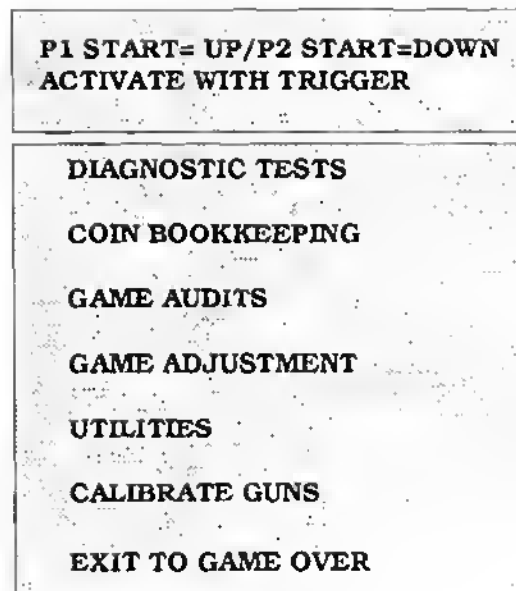

OPERATION

All Game Audits, Adjustments, and Diagnostics are options of the Main Menu. Each option, in turn, has its own menu, listing several choices that you may act upon as desired.

Move the Test Switch (on the cashbox lid panel), or close Switch #8 of DIP Switch Bank #2, to activate the Main Menu (shown below). Game adjustments, bookkeeping, and diagnostics are all accessible from this menu.

Press either Player 1 Start Button to move up the menu. Press either Player 2 Start Button to move down the menu. Notice that the options are highlighted in sequence. Press either trigger to activate a highlighted option.

Note: Only highlighted options can be activated.

Main Menu

DIAGNOSTIC TESTS

To enter the Diagnostic Tests from the Main Menu, press any Start Button to select (highlight) the Diagnostic Test option, then, press either trigger to activate the option.

Diagnostic Menu

Switch Test

The Switch Test allows the operator to test the switches on the control panel and the coin door.

During the Switch Test, the top of the screen is black and the bottom of the screen shows the coin door switches. Pressing a Start Button or trigger causes the name of the switch activated to light on the top of the screen. Pressing a coin door switch causes the switch location activated to light on the bottom of the screen. Releasing the switch causes the location to return to normal.

Press a Player 1 Start Button and Player 1 Trigger to return to the Diagnostic Menu.

DIP Switch Test

The DIP Switch Test allows the operator to check the position of the two 8-position DIP Switches on the CPU Board. The operator can also change the setting of each position of each DIP Switch during this mode.

Use any Start Button to select the DIP Switch Test and either trigger to activate it. The screen displays a layout of their current settings.

To change a DIP Switch setting, press the switch to the desired setting, then press the reset button on the CPU next to the DIP Switches. Check the screen to verify that the switch now shows the new setting.

Press either trigger to return to the Diagnostic Menu.

CPU Board Test

The CPU Board Test (much like the Start-up Test) allows the operator to check the RAMs and ROMs.

Select the CPU Board Test with any Start Button then, press either trigger to activate the automatic test of the CPU Board's RAMs and ROMs. When this test is activated, a "rug" pattern appears on the screen. The screen then changes to show the layout of the RAMs, and ROMs on the CPU. Any chip that is shown as black with a white outline is part of the CPU and should turn either red or green during the CPU Test. Any chip that is shown as gray with a white outline is not installed in the game. During the test, chips are good, if they turn green; they are faulty, if they turn red.

Press either trigger to exit back to the Diagnostic Menu.

Sound Board Test

The Sound Test allows listening to some of the sounds that the game is capable of producing. This test also emits a tone for each fault that is detected.

Select the Sound Board Test with any Start Button then, press either trigger to activate the test. The screen displays two test options:

GENERAL TEST analyzes the sound circuitry. A successful test causes a single "tone" to sound. Detection of a fault causes a series of tones or no tone at all to sound. To enter this test, or exit back to the Sound Test Menu, press either trigger.

PLAY SOUNDS tests synthesized & digitized sounds from the Sound Board. Enter and advance through this test by pressing either trigger. Repeat a sound by pressing the Bomb Button. Exit this test by pressing any Start Button.

Select RETURN TO MAIN MENU or BACK TO DIAGNOSTIC MENU with any Start Button. Press either trigger to activate your selection.

**P1 START= UP/P2 START=DOWN

Monitor Pattern Menu

The **RED, GREEN, and BLUE SCREEN** tests fill the screen with either red, green or blue. Select a screen test with any Start Button. Press and hold either trigger to see the color screen. Release the trigger to return to the Monitor Pattern Menu.

The **COLOR BARS** test fills the screen with several shades of colors to help with red, green and, blue level adjustments. Each color should appear sharp and clear. Press and hold either trigger to see the color bars screen. Release the trigger to return to the Monitor Pattern Menu.

The **CROSSHATCH PATTERNS** test fills the screen with a grid and a series of dots. The grid and the dots should be clear. The dots should appear round. Press and hold either trigger to see the crosshatch patterns screen. Release the trigger to return to the Monitor Pattern Menu.

If any of the Monitor Pattern Tests shows a need for adjustment, use the proper white knobs on the Monitor Board.

Use any Start Button to select **RETURN TO MAIN MENU** or **BACK TO DIAGNOASTIC MENU** and activate your selection with either trigger.

Driver Board Test

The Driver Board Test provides the operator with a way to test the Gun Coils, the Flashlamps, and the Gun LEDs. Press any Start button to select the Driver Board Test. Press either trigger to activate the test.

This test cycles through and pulses the Gun Coils (left, then right), the Flashlamps (left side, then right side), and the Green and Red LEDs (left gun, then right gun). To stop the cycle and continually pulse a particular coil, lamp or LED, press and hold the Service Credit Switch when the desired coil, lamp or LED is activated. As each device is activated, the name is displayed on the screen.

Press any Start Button to return to the Diagnostic Menu.

Burn-In Test

The Burn-in Test continually repeats the CPU Board Test.

Press any Start Button to select the Burn-In Test; then, press either trigger to activate the test. When the Burn-in Test detects an error, the test stops and displays an error message on the screen. The Audit Table specifies the number of Burn-in cycles successfully completed. Use this test to find intermittent CPU problems.

To exit this test, switch the game Off then On again.

COIN BOOKKEEPING

To enter the Coin Bookkeeping from the Main Menu, press any Start Button to select the Coin Bookkeeping option; then, press either trigger to activate it.

The Coin Bookkeeping Table records the coinbox totals and game play counters. The left side of the table names the bookkeeping item; the right side shows the number of coins, credits, or plays for each item.

To exit Coin Bookkeeping, press any Start Button to select RETURN TO MAIN MENU; then, press either trigger to activate it.

GAME ADJUSTMENTS

Press any Start Button to select the Game Adjustment option on the Main Menu; then, press either trigger to activate it.

The Game Adjustments Menu allows the owner/operator to change the Game Pricing and Game Difficulty.

The Game Adjustments Menu offers several options. Each option has its own menu. Press any Start Button to select an option; then, press either trigger to activate that option. On the next menu screen, press any Start Button to select the item you wish to modify; then, press either trigger to activate that item. The activated item provides a setting choice. Press any Start Button to change the current setting value; then, press either trigger to lock in the new setting value. Pressing the Player 1 Start Button increases the setting value. Pressing the Player 2 Start Button decreases the setting value.

To exit the Adjustments Menu, press any Start Button to select RETURN TO MAIN MENU; then, press either trigger to activate your selection.

Game Adjustment Menu

GAME ADJUSTMENTS Continued

Standard Pricing

Standard Pricing allows the operator to choose any of the "Standard" selections for the Standard Pricing Table.

Note: DIP Switch settings override Standard Pricing changes made from the Game Adjustment Menu.

Custom Pricing

Custom Pricing allows the operator to install pricing other than that of the Standard Pricing Table. Custom Pricing also allows the operator to select the maximum amount of credits per game, the amount of credits required to start a game, and the amount of credits required to continue a game.

Note: DIP Switch settings override Custom Pricing changes made from the Game Adjustment Menu.

Free Play

This option allows the operator to select free play. The settings for the adjustment are:

- No (factory)
- Yes

Game Difficulty

The operator chooses the the difficulty level of the game. The settings for this adjustment are:

- 1 Easiest
- 5 Medium (factory)
- 10 Hardest

Energy Per Play

The operator chooses the amount of energy a player receives each time he/she starts or continues a game. The setting range for this adjustment is:

- 5 Lowest
- 100 Medium (factory)
- 200 Highest

Bombs Per Play

The operator chooses the amount of bombs a player receives each time he/she starts or continues a game. The setting range for this adjustment is:

- 1 Lowest
- 25 (factory)
- 99 Highest

Minimum Time Per Play*

The operator chooses the minimum time in seconds each player is guaranteed to receive for each play. The setting range for this adjustment is:

- 30 Lowest
- 45 (factory)
- 300 Highest

* Not in effect during end-of-wave confrontations: For example, Tank Hunter Killer.

Attract Mode Sound

The operator determines whether the game will make sounds during the Attract Mode. The settings for this adjustment are:

- On (factory)
- Off

Auto High Score Reset

The All-time High Score Table is reset to factory values each time this many plays occur. The setting range for this adjustment is:

- Off
- 250 Lowest
- 5000 (factory)
- 25,000 Highest

High Score Entry

The operator determines whether the game will allow High Score Entry and Table display. The settings for the adjustment are:

- No
- Yes (factory)

Allow to Continue

The operator determines whether the game allows a player to continue after all the players are dead. The setting for this adjustment are:

- Never
- Sometimes
- Always (factory)

- (1) THIRD CHUTE UNITS**
- (1) FOURTH CHUTE UNITS**
- (2) UNITS/CREDIT**
- (3) UNITS/BONUS**
- (4) MINIMUM UNITS REQUIRED**
- (5) CREDITS TO START**
- (6) CREDITS TO CONTINUE**
- (7) COINS PER DOLLAR**
- (8) MAXIMUM CREDITS**
- RETURN TO ADJ. MENU**

- (1) Coins inserted accumulate units. This adjustment specifies the number of units given for each coin in the fourth chute (see "units/credit").
- (2) This is the number of coin units required to buy one credit.
- (3) One bonus credit is awarded after this many coin units have accumulated.
- (4) No credits will be awarded until this many coin units have accumulated.
- (5) Each player needs this many credits to begin a game.
- (6) Each player needs this many credits to continue a game.
- (7) The detailed bookkeeping screen shows total collections based on this many coins per dollar. (Set to zero to disable the display of money totals)
- (8) This is the limit for the credits counter. Additional coins inserted will be lost. (factory setting: 30)

UTILITIES

Press any Start Button to select the Utilities option on the Main Menu; then, press either trigger to activate it.

The Utilities Menu allows the owner/operator to clear the game's bookkeeping memory and to install a custom message.

P1 START= UP/P2 START=DOWN ACTIVATE WITH TRIGGER
CLEAR CREDITS
CLEAR COIN COUNTERS
CLEAR GAME AUDITS
RESET HIGH SCORE
DEFAULT ADJUSTMENTS
FULL FACTORY RESTORE
RETURN TO MAIN MENU

Utilities Menu

Press any Start Button to select an item from the Utilities Menu; then, press either trigger to activate that item. After an item has been activated, you are given the option of resetting that item or not. For example,

CLEAR CREDITS ? ARE YOU SURE ?		
<table border="1"><tr><td>YES</td></tr><tr><td>NO</td></tr></table>	YES	NO
YES		
NO		

Press any Start Button to choose YES or NO; then, press either trigger to lock in your choice and to return to the Utilities Menu.

To exit the Utilities Menu, press any Start Button to select RETURN TO MAIN MENU; then press either trigger to activate your selection.

CALIBRATE GUNS

Press any Start Button to select the Calibrate Guns option on the Main Menu; then, press either trigger to activate it.

The Calibrate Guns option allows the operator to align the guns.

Once the option is activated, the screen gives the operator three targets to aim and shoot at. First with the left gun, then with the right gun. The targets are located in the top left, center, and bottom right of the screen.

When the guns are calibrated correctly, the message

****Calibration Successful****

appears on the screen and the data is stored in the CMOS RAM. The game automatically returns to the Main Menu. If gun calibration is not successful the following message appears:

****CMOS RAM ERROR****

Unable to write calibration values.

Guns are not aligned.

Press any button to continue.

Begin again to calibrate the guns. If you make a mistake, press any Start Button to abort the procedure and start over.

To exit the Main Menu from the Calibrate Guns option, press the Player 2 Start Button to select EXIT TO GAME OVER; then, press either trigger to activate your selection.

Note

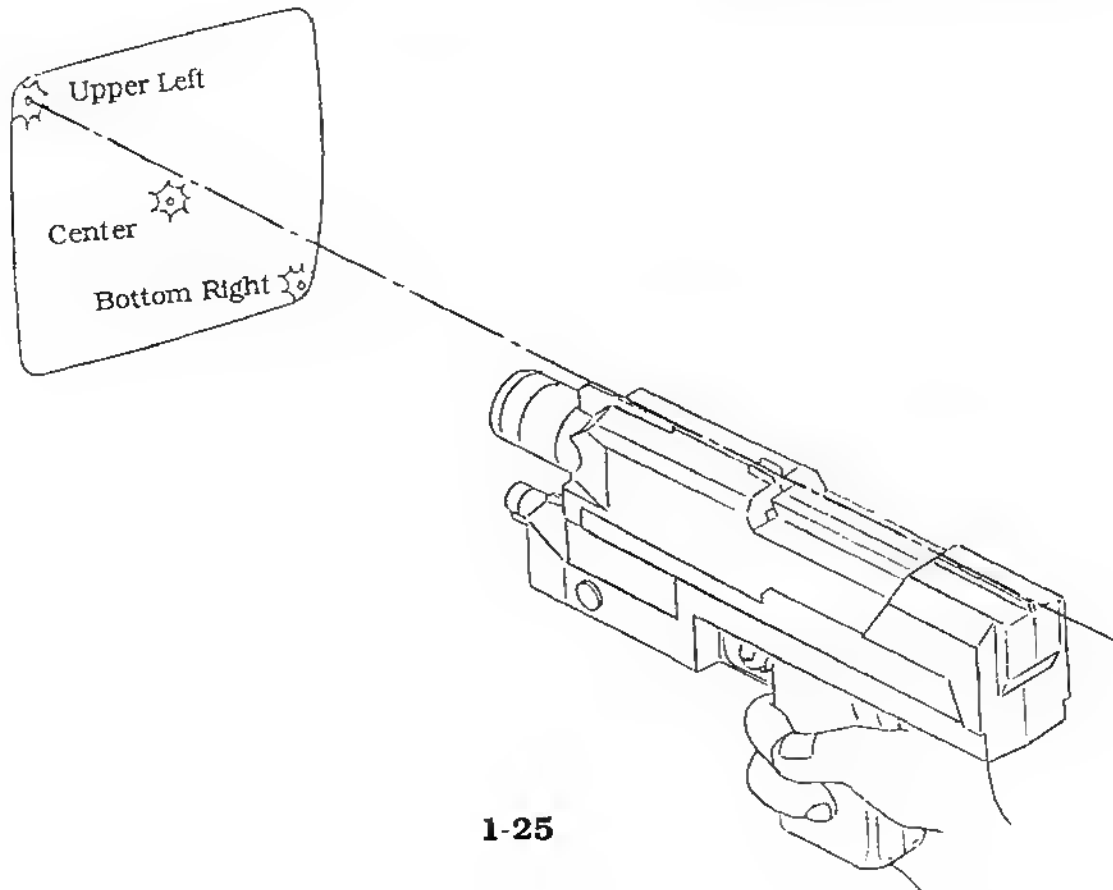

The Gun Assemblies are calibrated from the factory. However, if you change boards or replace ROMs, RAMs, or the battery, you must recalibrate the guns. Guns do not operate unless they are calibrated.

Note

Check Gun calibration when you receive your game. Guns might of been jarred during shipping and need to be recalibrated.

Note

It is necessary to turn Off the Test Switch in the coin door, and/or Switch #8 of DIP Switch Bank 2 on the CPU Board to enter the Game Over Mode.

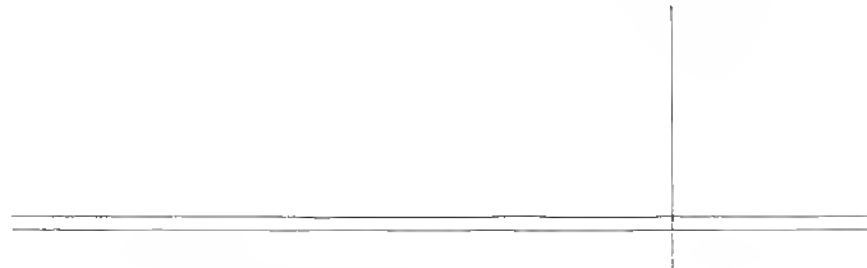

Troubleshooting

Problem	Possible Solution
No picture, or distorted picture.	<ul style="list-style-type: none"> • Check for faulty video board or monitor. Check for disconnected video signal cable. •
Turn the game on and nothing happens.	<ul style="list-style-type: none"> • Check line fuse. Check for +5Vdc at pins C, D, 3, and 4 of the CPU Board JAMMA Connector. •
No Sound.	<ul style="list-style-type: none"> • Check the speaker and speaker connection to pins L and 10 on the CPU Board JAMMA Connector. Check volume control setting. Check for +12V dc at pins F and 6 on the JAMMA Connector. Check interboard wiring from CPU Board to the Sound Board. •
No General Illumination.	<ul style="list-style-type: none"> • Check the 1A., S-B fuse on the floor, left of the front slide out door. •
Press the trigger and nothing happens.	<ul style="list-style-type: none"> • Check for open wires between the trigger and CPU Board JAMMA Connector. Check for proper ground. Check the trigger switch inside the gun assembly. •
Press the Start Button and nothing happens.	<ul style="list-style-type: none"> • Check for open wires between the Start Button and CPU Board JAMMA Connector. Check for proper ground. Check Start Button switch. •
Press the Bomb Button and nothing happens.	<ul style="list-style-type: none"> • Check for open wires between the Bomb Button and the CPU Board JAMMA Connector. Check for proper ground. Check the Bomb Button switch inside the gun assembly. •
No credits given when coins are inserted.	<ul style="list-style-type: none"> • Check DIP switch coin setting. Check for contamination on coin switch contacts. Check for an open wire between Coin Switch 1 and pin 16 on the JAMMA Connector or Coin Switch 2 and pin T of the JAMMA Connector. •
To many credits for the amount of coins inserted.	<ul style="list-style-type: none"> • Check Game Pricing setting. Check for a short between pins T & 16 on the JAMMA Connector. •
The game stays in the Test Mode.	<ul style="list-style-type: none"> • Check that the Test Switch in the coin door and Switch #8 on DIP Switch 2 are set to Off. •
Guns do not operate.	<ul style="list-style-type: none"> • Enter the Menu System and activate the Calibrate Guns option. Calibrate both Guns. •
Guns do not shake during play mode.	<ul style="list-style-type: none"> • Coil inside gun assembly could be bad. Fuse 1 (Player 1), or fuse 2 (Player 2) on the Coil Lamp Driver Board could be open. •
Flashlamps do not light.	<ul style="list-style-type: none"> • Flashlamp could be bad. Fuse 4 on the Coil Lamp Driver Board could be open. •
Flashlamps do not light, guns do not shake during play, and the LEDs on the guns do not light.	<ul style="list-style-type: none"> • Fuse 3 on the Coil Lamp Driver Board is probably open. • • •

WARNINGS & NOTICES

Warning

USE OF NON-MIDWAY PARTS OR CIRCUIT MODIFICATIONS MAY CAUSE SERIOUS INJURY OR EQUIPMENT DAMAGE! USE ONLY MIDWAY AUTHORIZED PARTS.

- * For safety and reliability, substitute parts and modifications are not recommended.
- * Substitute parts or modifications may void FCC type acceptance.
- * This game is protected by federal copyright, trademark and patent laws. Unauthorized modifications may be illegal under Federal law. This also applies to MIDWAY logos, designs, publications and assemblies. Moreover, facsimiles of MIDWAY equipment (or any feature thereof) may be illegal under federal law, regardless of whether or not such facsimiles are manufactured with MIDWAY components.

Warning

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generated, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Warning

Prevent shock hazard and assure proper game operation. Only plug this game into a properly grounded outlet. Do not use a cheater plug to defeat the power cord's grounding pin. Do not cut off the ground pin.

Notice

When MIDWAY ships a game, it is in compliance with FCC regulations. Your sticker is proof. If the sticker is missing or damaged, legal repercussions to the owner or distributor of the game may result. If your game does not contain an FCC sticker, call MIDWAY immediately.

Notice

No part of this publication may be reproduced by any mechanical, photographic, or electronic process, or in the form of a phonographic recording, nor may be transmitted, or otherwise copied for public or private use, without permission from the publisher.
